

Summary

Senior Software Engineer with 8+ years of industry experience in building scalable solutions, microservices, components and RESTful APIs. Adept at designing secure and efficient systems using modern backend, frontend frameworks & latest AI tools.

Skills

- **Programming Languages:** Java, JavaScript, TypeScript, ECMAScript
 - **Backend Technologies:** Java, Spring Boot, Node.js, Express.js, Hapi.js, Nest.js, RESTful APIs, gRPC, Microservices, Modular monolith
 - **Frontend Technologies:** React.js, Redux, HTML, CSS
 - **Databases:** MongoDB, PostgreSQL, MySQL, Redis,
 - **Cloud:** Docker, Kubernetes, AWS, Jenkins, API Gateway, Azure
 - **Testing Frameworks:** Mocha, Chai, Jest
 - **Message Queues:** RabbitMQ, Kafka, RedisPub/Sub
 - **Search & Analytics:** Elasticsearch, OpenAPI/Swagger
 - **Tools:** Azure API Gateway, Postman, VisualStudio Code, JIRA, Github Copilot, Langchain, RAG
-

Non-Technical Skills

- Agile and Scrum methodologies, Communication, Teamwork & Collaboration
-

Languages

- Fluent in English, Hindi and Punjabi
-

Experience

Deloitte, Senior Consultant (June 2023-Present), Gurugram, India

- Led backend development team, overseeing architecture, database design & involving in client interactions
- Managed deployments and ensured smooth integration with existing systems.
- Proactively managed application versioning to ensure smooth deployment of updates and seamless integration with existing systems.

Deloitte, Consultant (October 2021-May 2023), Gurugram, India

- Integrated third-party APIs for data synchronization and enhanced messaging systems.
- Individually worked on core features of the project developing interceptors & API gateway mechanism for secure & seamless data transfer for APIs.

Appinventiv Technologies Pvt. Ltd, Software Engineer (September 2019-October 2021), Noida, India

- Independently designed and managed backend system architecture and database structures for optimal performance and scalability.
- Applied MongoDB transactions for improved data consistency and reliability.

CodeBrewLabs, Software Engineer (March 2018-July 2019), Chandigarh, India

- Developed random data generation algorithms integrated with the Heroku ecosystem.
 - Enhanced API performance, reducing response latency.
-

Projects

NeoforCorporates: Axis Bank (Deloitte)

- Developed Mpin and TOTP modules for secure mobile login.
- Integrated API responses to streamline authentication mechanisms & using cache mechanism for response optimizations with unit test cases covered using jest.
- Integrated Winston logging for enhanced monitoring and debugging along correlationId.
- Developed features like Auth & Axios interceptor for capturing audit logs
- Created partitions on the database for high availability & optimal performance of the database queries.

Moxy(AppinventivTechnologiesPvt.Ltd)

- Implemented MongoDB transactions with rollback capabilities for multi-collection updates.
- Developed architecture for payments functional components used redux & hooks for data & api management.
- Integrated Stripe subscriptions and webhooks, iOS in-app purchases, managing cross-platform purchases.
- Applied child process mechanism for sending bulk alerts to all users of the application.
- Developed a Redis-based ranking system and implemented Kafka for SNS & FCM notifications.

BajajFinServ(AppinventivTechnologiesPvt.Ltd)

- Developed microservices for the application & it's functionalities.
- Created admin components with secure role-based access control.
- Integrated client-specific messaging systems to improve communication flows.

Yeto(CodeBrewLabs)

- Developed a random data generation algorithm for personalized user experiences.
 - Enhanced database query performance and integrating multiple systems to fetch data to be stored in the Database to be provided as an api response to the FE.
-

Education

Punjab Technical University, Bachelor of Technology in Computer Science Engineering (August 2013 - March 2017)

Certificates

- MongoDB – Building RAG application (2026), sharding strategies (2025)
 - Geeksforgeeks, MongoDB Toolkit (2025), Geeksforgeeks, React JS (2025)
 - Udemy, GenerativeAI for Beginners, gRPC [Node.JS] (2024)
 - HackerRank, Gold Badge for 10 days of JS, Problem Solving (2023)
-

Achievements

- Move the Dot - Individual: For outstanding technical contribution and innovation.
- Move the Dot - Team: For demonstrating collaboration, commitment and leadership.
